

How to setup ionic 2 theme

This document help you setup a ionic 2 theme which you bought from ionic market.

System requirements

`npm` version from 4.0.5 and `node` from 7.4.0 Run these command to check your version:

```
npm -v  
node -v
```

The easiest way to update is to install the latest version of Node.js. You can also update `npm` by following these instructions.

`ionic` version from 2.2.1. Run this command to check your version:

```
ionic -v
```

Update your ionic by run these comands:

```
npm uninstall -g ionic  
npm install -g ionic
```

Setting up the theme

Please follow these step

1. Download .zip file from Gumroad or Sellfy and unzip.
2. Run `npm install` to install libraries
3. Run `ionic serve`, your browser will automatically open this app

Changing the style

Color `variables` are defined at line 25 of `src/theme/variables.scss`

You can modify this file to change app's color.

Common styles are defined at `src/app/app.scss`. Modify this file to change common style of the app.

To change each page's style. Please write your style into

`src/pages/{page_name}/{page_name}.scss`

Adding a new page

To create a page you can use the following command:

```
# ionic g page <PageName>
ionic g page myPage

√ Create app/pages/my-page/my-page.html
√ Create app/pages/my-page/my-page.ts
√ Create app/pages/my-page/my-page.scss
```

Read more about ionic generate [here](#).

Build APK file

Make sure that you installed Android SDK first. Run this command to build .apk file

```
ionic build android
```

Or run it in your device with:

```
ionic run android
```

About me

My name is Dao Duy Thanh. I'm a full stack developer (PHP + frontend).
